## Professional Profile

I'm an experienced software engineer with extensive experience in modern software development practices and working in the cloud. While my background has been rooted in Microsoft technologies, I've embraced open source technologies and tooling along the way making me a versatile technologist.

I've recently moved away from cutting code (Although, moving away just means my 8 hours of writing code becomes more like 4!), and embraced a practice leadership role with Provoke Solutions. That means providing ownership and vision to grow Provoke's already large engineering team, and instill an "anything is possible" mindset.

I'm someone that never stops learning, and I've been running a blog (<https://dotnetcoretutorials.com>) for several years, learning and then teaching about .NET Core. I've also recently published a free lightning video course to walk developers through everything new in C# 9 (<https://www.udemy.com/course/whats-new-in-c-9/>). Through all of this, I've helped both individuals and companies make the most out of .NET Core and transition from .NET Framework.

## Tech Skill Set

<b>Web Technologies</b> C# ASP.NET Core C# Web API/MVC AngularJS/Angular 8 HTML/CSS/Javascript LESS/SASS	<b>Cloud Providers</b> Azure (PAAS) AWS (IAAS)	<b>Database</b> Azure SQL/MSSQL MongoDB PostgresSQL Entity Framework/Core NHibernate Dapper
<b>Other Technologies</b> RabbitMQ/EasyNetQ Elasticsearch/NEST Ninject/Unity/Autofac New Relic/Raygun	<b>CI/CD/Testing</b> Azure Devops Teamcity Jenkins Specflow/Selenium NUnit/XUnit	<b>Tooling</b> Azure Devops Git/GitFlow Github/Bitbucket Jira Trello

## Work History

### Development Practice Lead

April 2021 – Present

- Provide ownership and vision to grow Provoke's Microsoft software development customer base and capabilities by developing a global centre of excellence across all aspects of the software development process
- Coach and mentor Provoke's 40+ strong engineering team across a wide array of technology, instilling an "anything is possible" attitude
- Define, develop and implement relevant practice standards, procedures and templates across Provoke's tech stack of .NET Core, Angular, Office 365 and Azure platforms.

- Provide architecture, development expertise, and engineering support to Provoke's pre-sales effort, including responding to RFPs/RFIs, estimations, client presentations, and statements of work.
- Refine and re-invent Provoke's hiring practices including introducing automated testing and in-person/screensharing technical tests, as well as refining Provoke's hiring flow to reduce time to hire.
- Provide best practice documentation and guard rails across the wider engineering group including automated UI testing (Specflow/Selenium), static code analysis (Sonarqube), fully automated CI/CD (Azure Devops), and Infrastructure as Code (Azure ARM/Bicep/Powershell)

### **Contract Software Engineer/Consultant**

August 2019 – April 2021

- 3 month contract with Provoke to architect a sales VOIP solution using .NET Core, Azure, Angular and Twilio.
- 9 month contract with Provoke Solutions to build an agricultural management solution using ArcGIS, Angular, .NET Core and Azure.
- 3 month contract with Provoke Solutions to do bespoke development on a sales info platform build using Squidex CMS, Angular Universal, NodeJS and Azure.
- 3 month contract extension with Silver Fern Farms to build a SPA self-service portal using .NET Core, Angular 8, and hosted all in Azure PAAS.
- 3 month contract with Silver Fern Farms to ensure their legacy platform of VB6, VB.NET, and C# WPF apps don't fall over while moving to a more modern architecture.

### **Writer/Blogger - .NET Core Tutorials ([dotnetcoretutorials.com](https://dotnetcoretutorials.com))**

December 2016 – Present

- In late 2016 I started a blog to jot down ideas around the newly formed .NET Core framework from Microsoft.
- Grown to over 120k monthly readers spread out across the globe.
- Use my experience to help companies make the most out of .NET Core and come up with transition plans to migrate from .NET Framework.
- Contacted by well-known companies to test .NET Core iterations of their products including Raygun APM, Datalogics PDF, RevDebug, and NDepend.

### **Software Engineer - Timely**

March 2018 – August 2019

- Took a leap and moved to Dunedin, partly to escape the Auckland property bubble, partly to jump on board with an exciting SAAS company in Timely.
- Lead numerous mini-projects around code performance, utilizing APM tools such as New Relic and Raygun, benchmarking tools such as BenchmarkDotNet and ANTS Profiler, and SQL improvements using Azure SQL Performance Tuner.
- Lead development on Timely's internal mobile API build on .NET. Enforced API standards such as proper use of REST, JWT Authentication and API Versioning.
- Architected and lead a team to build an integration between Timely and Zapier built using .NET Core/NodeJS.

### **Technical Lead – Provoke Solutions**

April 2017 – March 2018

- My role at Provoke is a unique one where I split my time leading projects, fixing failing ones, and using my past product development experience to improve technical expertise and process within a bespoke software company.
- Technical Lead for a chat bot project for a large bank. Utilized Microsoft Bot Framework, Azure LUIS (Language Understanding Service), QnA Service, Sentiment Analysis, as well as various Azure compute/storage services.
- Technical Lead on a public web and customer self service portal build for a large utilities company. Built on the Kentico platform and hosted in Azure.

#### **Contract .NET Software Engineer – wadegausden.com**

September 2016 – April 2017

I decided to take a step away from permanent roles and take a look at the contract market. My primary reason was to taste roles outside of my SaaS/Startup/Product background, and get a feeling for how enterprises, vendors and other types of companies work.

- 3 month contract with Bartercard NZ to build an online ECommerce Platform using NopCommerce in C#/.NET.
- 2 month contract with Geographical Business Solutions to build a web backend for a GIS Farming solution in AngularJS/LESS/.NET Core.
- 3 month contract to build a SPA Self service portal for Vector Power. Leading a team of 3 build on Azure Websites, Azure SQL, SASS/AngularJS and .NET.
- 3 month piece of work to help get various projects across the line for Re-Leased Property SAAS Platform (C#/.NET).

#### **Team Lead – Unleashed Software**

June 2015 – June 2016

- Started as a Senior Engineer but very quickly moved into a Team Lead role working on Unleashed's Inventory Management SaaS product built primarily on a Microsoft stack (C# MVC, MSSQL, Angular)
- Stepped into Team Lead role to lead the "System Team". The System Team is tasked with the heavy lifting of moving to a cloud provider (AWS/Azure), setting patterns for working with new technologies (Elasticsearch, Azure services, NoSQL), and other core functionality such as billing and deployment.
- Moved legacy applications to better utilize Azure PaaS offerings such as Azure Service Bus, Storage Queues, Blobstorage and Web/Worker Roles.
- Lead the drive for better CI driven from Teamcity and attempted the move to use tooling such as Chef to give us more predictable deployments and environments.
- Provided direction for development processes such as branching strategy, deployment processes, and team building.

#### **Senior Engineer - Findly**

October 2013 – June 2015

- Senior engineer working on Findly's suite of candidate sourcing SaaS products built using C# Web API as a backend for SPAs, but with many other non Microsoft technologies supporting it.
- Worked extensively in cloud environments such as Azure and Amazon AWS (Including the migration from Azure to AWS). Utilized cloud technologies such as

AWS EC2, AWS S3, AWS RDS, Azure Storage Queues and Azure Web/Worker Roles.

- Large use of NoSQL technologies such as MongoDB and Elasticsearch, alongside traditional relational databases such as Azure SQL and PostgreSQL.
- Part of the drive for better microservices architecture with single API's being used for mobile and web.

#### **Software Developer – Various (Magnet Design, KRevo, Bauer Media)**

March 2010 - October 2013

- Got my start working on a variety of projects, most notably for Bauer Media, the largest magazine publisher in NZ.
- Lead developer for Autotrader.co.nz. NZ's largest motoring classifieds site. Built on .NET, SOLR, Endeca and MSSQL.
- Worked on numerous projects for Magnet Design with some of NZ's leading agencies (Ogilvy, Salt and Tango)

**Education** Diploma in Distributed Software Development  
Ames Training  
**2009**

Diploma in Systems Engineering  
Ames Training  
**2007**
